

Experiment 9: Design input forms that validate data (e.g., email, phone number)

Name: Vishnu Priya D K

Roll No: 240701603

Aim:

To design input forms that validate user data such as email and phone number and display error messages using HTML, CSS, and JavaScript with Validator.js.

Step 1: Setting Up the HTML Form

```
<link rel="stylesheet" href="login.css">
<html>
  <head>
    <title>
      Login Page
    </title>
  </head>
  <body>
    <div id="container">
      <h1>Login</h1>
      <form id="myForm">
        <label>Email:</label>
        <input type="text" placeholder="Enter your Email" id="email">
        <small id="emailError"></small>

        <label>Phone Number:</label>
        <input type="text" placeholder="Enter your Phone Number" id="phone">
        <small id="phoneError"></small>
        <button type="submit">Submit</button>
      </form>
    </div>
  </body>
  <script src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.min.js"></script>
  <script src="login.js"></script>
</html>
```

Step 2: Styling the Form with CSS

```
body {
  margin: 0;
  padding: 0;
  font-family: Arial, sans-serif;
  background: linear-gradient(to right, #4facfe, #00f2fe);
  height: 100vh;
  display: flex;
  justify-content: center;
  align-items: center;
}
#container{
  background: white;
  padding: 30px;
  border-radius: 10px;
  width: 300px;
}
h1{
  text-align: center;
}
label{
  display: block;
  margin-top: 20px;
  margin-bottom: 5px;
}
input{
  width: 100%;
  padding: 8px;
  border-radius: 10px;
  border: 2px solid #ccc;
}
```

```
button{
  margin-top: 20px;
  width: 100%;
  height: 40px;
  border-radius: 20px;
  border: none;
  background-color: #4facfe;
  cursor: pointer;
}
button:hover{
  background-color: #00f2fe;
}
small{
  color: red;
  font-size: 12px;
}
```

Step 3: Adding JavaScript for Validation

```
document.getElementById("myForm").addEventListener("submit", function(e) {
    e.preventDefault();

    let email = document.getElementById("email").value;
    let phone = document.getElementById("phone").value;

    let emailError = document.getElementById("emailError");
    let phoneError = document.getElementById("phoneError");

    let isValid = true;

    emailError.textContent = "";
    phoneError.textContent = "";

    if (!validator.isEmail(email)) {
        emailError.textContent = "Invalid email format";
        isValid = false;
    }

    if (!validator.isMobilePhone(phone, 'any')) {
        phoneError.textContent = "Invalid phone number";
        isValid = false;
    }

    if (isValid) {
        alert("Form submitted successfully!");
    }
});
```

Output Screen:

- If the user enters an invalid email, an alert message "Invalid email format" is displayed.
- If the phone number is incorrect, "Invalid phone number" is shown.
- If both inputs are valid, a success message is displayed.

Login

Email:
abc
Invalid email format

Phone Number:
123
Invalid phone number

Submit

127.0.0.1:5500 says
Form submitted successfully!

OK

Login

Email:
abc@gmail.com

Phone Number:
12345678

Submit
