

Experiment 6: Layout and Colour Scheme Evaluation for Mobile App

Name: Vishnu Priya D K

Roll No: 240701603

Aim

To experiment with different layouts and color schemes for a mobile application and collect user feedback on aesthetics and usability.

Objective

- To design app interfaces using different layouts and colors.
- To evaluate user satisfaction and usability.
- To study the impact of visual design on user experience.

Description

The experiment includes multiple app screens with different layout styles and color combinations. The interface uses attractive dessert-themed visuals with organized content placement and navigation elements.

Design Elements

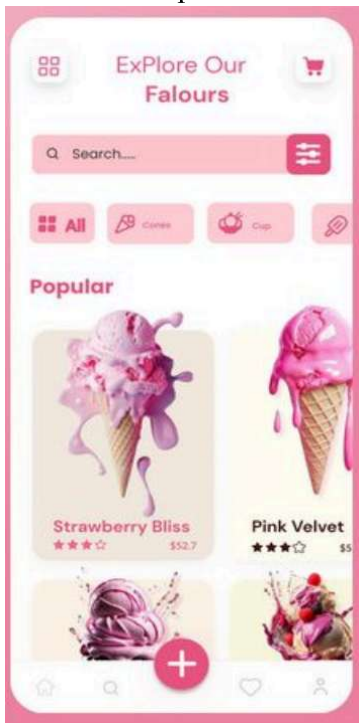

- Different color schemes
- Image-based layouts
- Navigation buttons
- Product cards

Screens Included

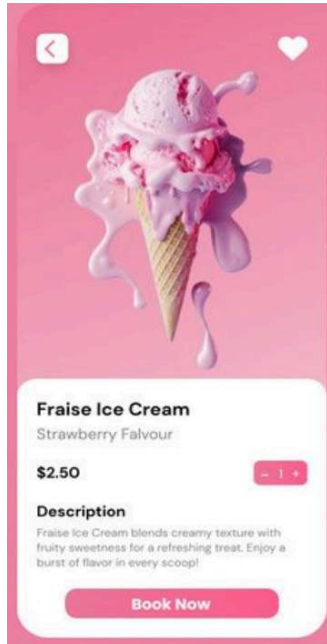

- Welcome screen

- Home/product screen

- Product detail screen

Methodology

1. Create multiple UI layouts with different colors.
2. Show the designs to users.
3. Collect feedback based on:
 - Visual appeal
 - Readability
 - Ease of navigation
 - User satisfaction
4. Compare user responses.

HCI Principles Used

- Consistency
- Visibility
- Aesthetic design
- Simplicity

Result

Users preferred layouts with organized content and soft color schemes. Attractive visuals and proper color combinations improved usability and user experience
